Product Requirements Doc + Skill Document for Claude

---

1. One Line Summary

Solon Live helps residential care home owners place high-quality caregivers into their facility so they can operate with peace of mind

2. The User (Initial Customer Segment)

Residential care owners with one facility, typically with under one year of experience, that cares for 6 beds in Washington state and manages at least two caregivers. They are

3. The Need

Problem statement: Today, my user uses word of mouth, WhatsApp group chats, and sporadic outreach to discharge managers to find qualified caregivers for their community. This tactic falls short, as residential homeowners take a risk on matching, which therefore creates more problems developing within their residential community. Setbacks can include inspections, citations, resident complaints, and disruptions to administrative workflows like reimbursement, marketing, housekeeping, and negotiated care plans.

4. Value Propositions (Tighten)

Quality Caregiver Matching
Sleep with Surveillance
Safety Rails Against Citations
Clear Your Time
Residential Saftey

5. User Stories

Persona: Amanda, a first-year owner of a six-bed adult family home in Washington who manages two caregivers and doesn't always live on site.

As Amanda, I want to know whether a candidate has the skills and genuine care for seniors before I hire them, so that I don't hire someone who gets frustrated or disconnects from residents. (Hiwot)
Done when: Each candidate shows their certification, training, experience, and why they do this work.

As Amanda, I want to hire caregivers who are committed to adult family home work, so that I don't settle for staff below my standards or risk closing my home. (Robin)
Done when: Candidates shown are actively seeking adult family home roles.

As Amanda, I want to cover open shifts with caregivers I trust, so that I'm not filling in myself and residents are safe when I'm not on site. (Robin)
Done when: Amanda can see qualified candidates available for the specific shifts she needs.

As Amanda, I want to find caregivers recommended by other owners, so that I can fill roles quickly with someone already trusted. (Robin)
Done when: Amanda can see which candidates were referred by other owners in her area.

As Amanda, I want to know my caregivers are prepared for the hard parts of the job, so that I can trust their care and justify paying them more. (Laura)
Done when: Amanda can see which training each caregiver has completed.

As Amanda, I want confidence that my caregivers follow state requirements, so that my home passes inspections and avoids citations. (Laura, Josie)
Done when: Amanda can see each caregiver's certification status and any upcoming renewal dates.

6. Out of Scope

- Do not build a conversation history
- Do not build a complex product from scratch
- Do not build with unnecessary technical infrastructure by default
- Do not build a complex UI/UX
- Do not build unnecessary features
- Do not prompt to build a Retrieval-Augmented Generation (RAG) pipeline using a made-up vector database to inject relevant document snippets into the prompt.
- Do not create rate limiting & cost tracking infrastructure; I need to build middleware to track token usage per user, manage API rate limits, and implement caching (like Redis, an open-source, in-memory data structure store used as a database, cache, message broker, and streaming engine) to reduce repetitive API costs.

7. Constraints and assumptions

- Use fake data, not HIPAA compliant, not for real residents or real cargiver records
- Washington state only
- Web that works on phone screen
